

BRAKE BLOCK TECHNICAL SHEET

Product Description:

A woven brake block is a friction material, asbestos-free, made from glass and cotton fibers impregnated with phenolic resins and molded in a compact woven design. This material is mainly used in heavy industrial applications such as cranes and drilling equipment, where its high density, strength, and stability are crucial for safe and durable braking performance.

Available Sizes:

From 3/4" to 1 1/2"

Benefits:

- High resistance to friction and temperature.
- Long lifespan under extreme conditions.
- Guaranteed safety in heavy industrial applications.
- Asbestos-free.

Technical Features:

- Manufactured with high-quality raw materials.
- Production technology focused on safety and durability.
- Compliance with international industrial standards.

Applications:

- Oil industry equipment.
- · Gas industry equipment.
- Mining industry.
